## **POLICY-**

NAACO policy is to provide the Sportsman wherever he may be with the highest quality products embodying the finest workmanship and materials available, and incorporating all proven and new NAACO safety specifications at the most moderate prices. All products manufactured or sold by the NAACO organization are covered by the following warranty:

### **WARRANTY**

NAACO products are fully guaranteed against any defects due to faulty material or workmanship for a period of 1 year from the date of purchase by the consumer.

## **SALES-**

NAACO products are sold in Canada by over 175 Distributors located in all parts of Canada to over 5,000 dealers. Our export affiliation is A. A. Bolte & Co. Ltd. of Montreal who covers all world markets except U.S.A. In U.S.A. Firearms International Corp. of Washington, D.C., are our sole representatives for NAACO Sporting Arms.

## **SERVICE-**

NAACO maintains a complete Service Department where all products sold by the organization are backed by a complete inventory of all parts ready for shipment to any point in the world to provide NAACO Service.

For the first time in Canada gunsmiths will be able to buy direct from the NAACO factory a full line of actions, Barrelled actions, Walnut stocks semi-finished, Walnut Blanks, Barrels, Parts, etc., to provide their customers with Custom Made Sporting Arms.

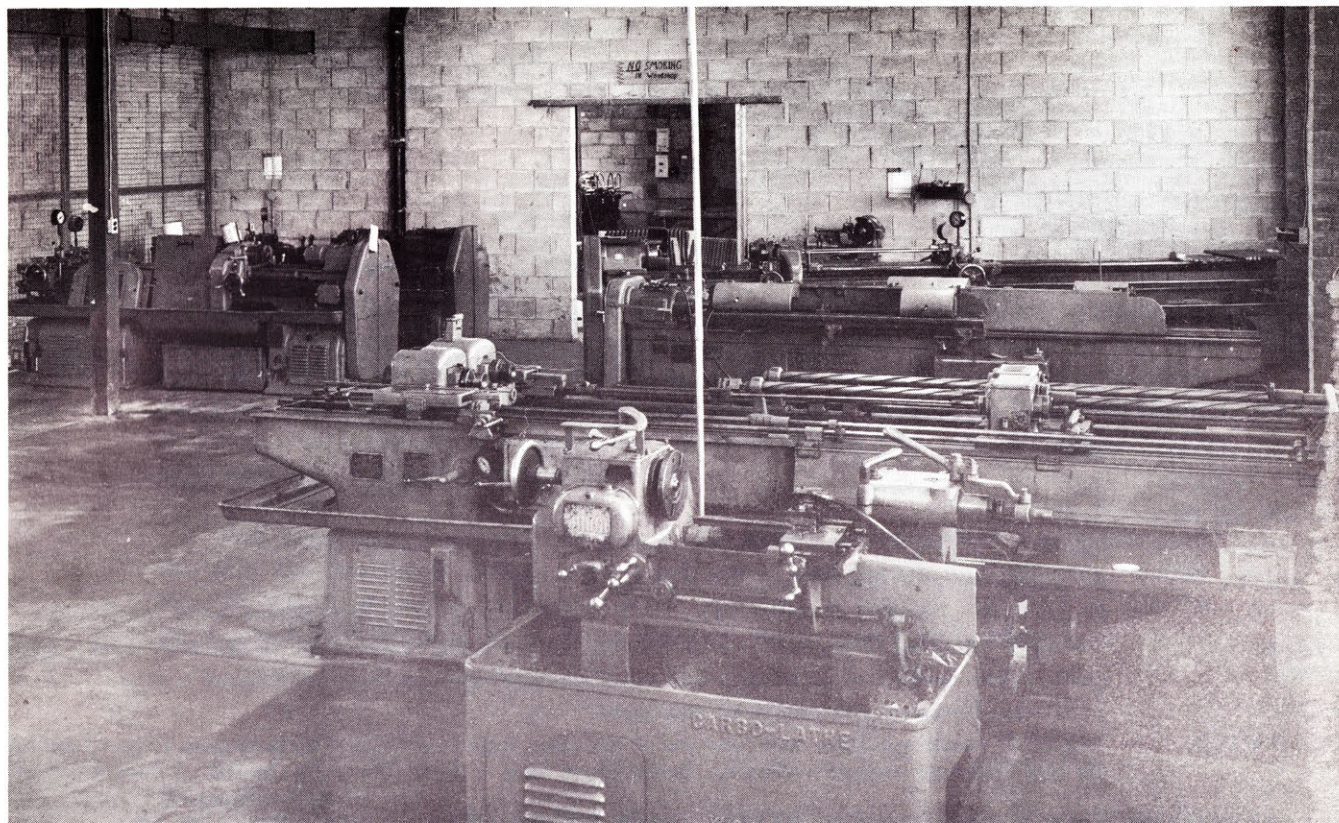

Also for the first time in Canada NAACO offers its new modern Testing Ranges to numerous Target Rifle Clubs who each evening will enjoy this fast growing sport and are guests of NAACO.

It will be a NAACO Service to arrange a trip through Canada's only complete arms plant.

**NOTE—** All NAACO Sporting arms, Trade Names and items published in this Catalogue are registered or covered by Patents Pending and cannot be published in any form without the written consent of North America Arms Corp. Ltd.

**NORTH AMERICA ARMS CORPORATION LTD.**

## **A SECTION OF NAACO BARREL DEPARTMENT**

Here is a section of the NAACO Barrel Department where precision barrels are completely manufactured from special alloys, rigidly controlled throughout all manufacturing cycles.

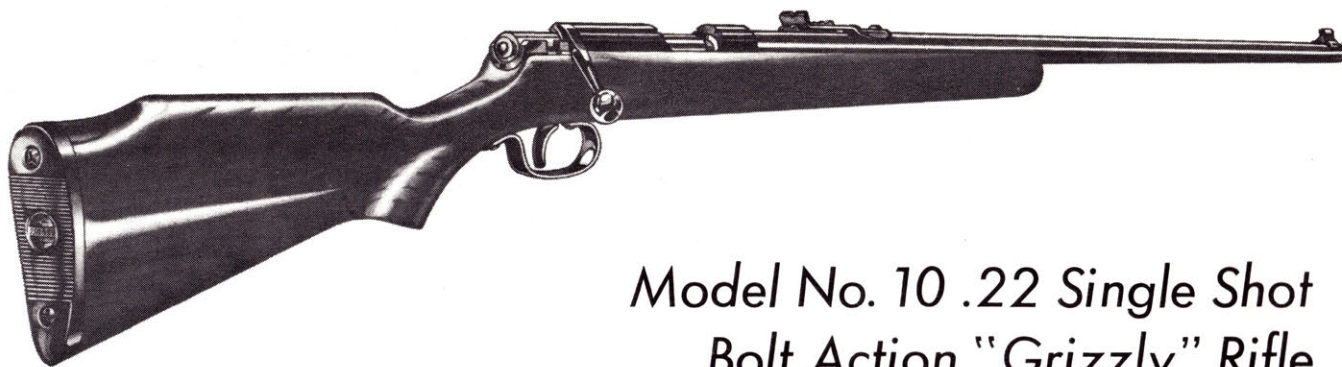

For the first time in Canada a complete line of: 22 Calibre Barrels, High Power Calibre Barrels, Magnum High Power Barrels, Shotgun Barrels, Pistol Barrels, are being manufactured by NAACO and after being incorporated into finished Sporting arms are individually test fired, patterned and proofed.

Also for the first time NAACO employees are producing Sporting arms that are being exported to world markets and creating a new standard of Excellence that is fast gaining recognition of the world's most discriminating buyers.

## Model No. 10 .22 Single Shot Bolt Action "Grizzly" Rifle

### SPECIFICATIONS

|                 |                                                                                                                                                                                                                      |
|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OVERALL LENGTH: | 40½"                                                                                                                                                                                                                 |
| BARREL LENGTH:  | 22"                                                                                                                                                                                                                  |
| LENGTH OF PULL: | 13½"                                                                                                                                                                                                                 |
| WEIGHT:         | 5½ lbs.                                                                                                                                                                                                              |
| BLUEING:        | All models have "NAACO" long life high lustre finish.                                                                                                                                                                |
| ACTION:         | Smooth, self cocking, bolt action, ramp feed, double extractors, milled receiver for scope mount.                                                                                                                    |
| SAFETY:         | "NAACO" designed rotary type. An outstanding feature is that shell can be loaded when safety is on.                                                                                                                  |
| STOCK:          | Monte Carlo design butt, pistol grip and semi beavertail forearm in highly finished walnut.                                                                                                                          |
| SIGHTS:         | 1/10" post front and elevated open rear sight.                                                                                                                                                                       |
| AMMUNITION:     | "NAACO" recommends the continued use of the <i>same length cartridge</i> . This gives you longer chamber life and facilitates ease of extraction. Select short, long or long rifle shells. Model 10 fires all three. |

All Models are "Proof Fired and Zeroed" at "NAACO" Factory and carry full Factory Warranty and Service

CAUTION: All .22 ammunition is *dangerous* up to one mile and should not be fired into or over water, or at any target that is not fully checked for safe backstop.

**NORTH AMERICA ARMS CORPORATION LTD.**

*Model No. 35 Mallard 12 Ga. Magnum  
Automatic Shotgun 30" Barrel F.C.*

**3 Shot Gas operated with  
or without ventilated Rib**

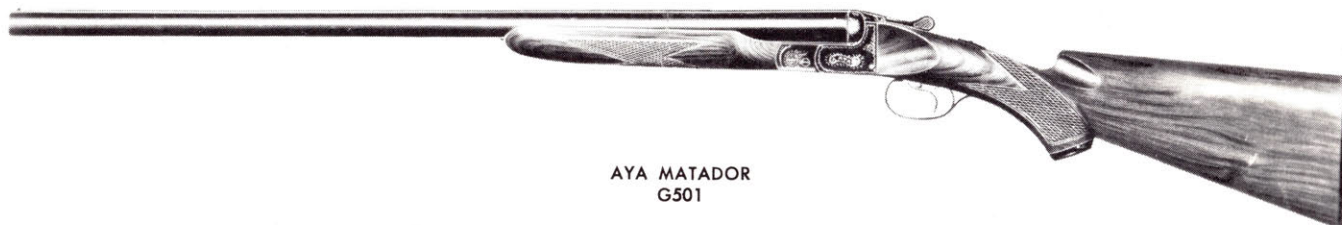

Here is one of the new models presented by NAACO for 1961. It is designed for a 3" Magnum shell and has the advantage of being able to also fire both a 2¾" magnum or a 2¾" standard. The magazine tube holds 2 shells and the chamber 1, providing the sportsman with long range effectiveness with minimum weight. Weight of the new Model No. 35 is approximately 6¼ lbs. Select French Walnut is used in forearm and stock with pistol grip and forearm finished in 16 line checkering. Recoil Pad has white line spacer between recoil pad and Walnut stock. Plain or ventilated rib barrels are available in plain or chrome lined. Stock dimensions are well proportioned and are the same as our Model No. 25, 3 Shot Pump Action. Barrels will be available in 30" F.C., 28" Mod. and 26" cylinder. Due to the great number of new models NAACO is producing this year, availability may be limited in 1961.

*The above Model is fully covered by NAACO Factory Warranty and Service*

# AYA MATADOR SHOTGUNS

AYA MATADOR  
G501

## Model No. 45 "AYA" Imported, Side by Side, Double Barreled Shotguns

**SINGLE SELECTIVE TRIGGER, AUTO. EJECTORS.  
DOUBLE TRIGGER ON 10 GAUGE ONLY.**

Of the many types of guns available to the sportsman none can boast of the versatility, light weight, trim line and ease of handling of the double barrel shotgun. In the Matador, we have combined all of the best features of the "double" to produce a shotgun of a quality matched only by guns selling at more than twice the cost.

AYA Matador shotguns are built on the strong box lock action of the Anson and Deeley design, with double underlocks engineered to compensate for wear. All major internal parts, including sear bars, hammers, cocking levers, etc. are made by the latest precision investment casting methods, thus permitting the use of the tough, wear resistant steels, which are necessary for long wearing contact surfaces and trouble free, positive functioning of the shotgun as a whole. All moving parts are hand polished for smooth, easy operation. All Matador guns, except the 10 gauge Magnum, are supplied with a single selective trigger, engineered to provide positive, equalized trigger pull on

both barrels. The trigger is provided with an inertia block as proof against doubling. The 10 gauge Magnum gun is supplied with conventional double triggers. Powerful selective automatic ejectors on all Matadors kick out only the fired shells when the gun is opened. Unfired shells remain in the gun, but are lifted for easy removal by hand. The trigger guard is of ample size to assure comfortable shooting, even when wearing gloves. Firing pins are individually spring mounted in bushings through the face of the action and are not an integral part of the hammer. The barrels, of finest steel, are each forged in one piece with one half of the locking lugs, thus providing utmost strength. Special attention is given to boring, chambering, choking, polishing to a mirror-like finish and maintenance of absolute concentricity. The stock and fore-end, of finest close grained European walnut, are carefully fitted to the metal to provide perfect mating of metal and wood. Fine hand checkering, well fitted butt plate and pistol grip cap and positive, easy working fore-end release, plus the carefully dimensioned butt stock and fore-end, the barrel and action which have been polished and blued to a velvety lustre, and the beautiful hand rubbed, weather resistant finish, add up to a shotgun unmatched in quality, value and beauty. The guns of each gauge are proportioned for that particular gauge. The .410 Matador is one of the very few shotguns that has an action specifically built for this gauge.

**STOCK DIMENSIONS:** Overall Length 28", with Barrels 47". Length of Pull 13 3/4", Drop at Comb 1 3/8", Drop at Heel 2 1/4", Pitch Down 2 1/8", Deluxe Beavertail Forearm finely checkered. Each gauge has its own proportionate balanced action.

## Model No. 65 "Valmet" 12 ga.

The Valmet shotgun was designed specifically to meet the ever increasing demand for a moderately priced, well made, over and under. Made by Valmet of Finland, manufacturer of the

world famous Finnish Lion Free Rifle, the Valmet features single selective trigger, hand checkered French walnut stock and forend, rubber butt plate, not to mention superior workmanship throughout and smooth operating time-proven action. Special ordnance steel is used in all metal parts. All parts are machined, no stampings throughout. Special attention is paid to the quality and strength of the barrel steel. The barrels are independent, therefore vibration and heat does not affect the alignment of the second barrel.

# SAKO *VIXEN* RIFLES

World Renowned Quality for Canadian Sportsmen

THE VIXEN SPORTER  
.222R, .222 Mag.  
B123

THE VIXEN MANNLICHER  
.222R  
B133

THE VIXEN HEAVY BARREL  
.222R & .222 Mag.  
B143

CREATED BY OY SAKO AB, Finland's most progressive and modern arms maker, the Sako Vixen Rifle was developed to meet world-wide demand for the ideal varmint rifle, combining light weight, accuracy and easy handling. Through efficient engineering and expert craftsmanship the demand was met and surpassed. The exceedingly tough action has integral tapered dovetail scope mount blocks, to permit easy and positive mounting of scope and peep sight. The barrel is precision made of fine Bofors steel and the stock is of choice hand checkered French Walnut. Perfect inletting and careful mating of wood and metal help to make this a rifle that meets every requirement of beauty, accuracy and rugged dependability. All Sako rifles are tested for accuracy and perfect functioning. No rifle that fails to meet the test leaves the factory. Available in

three type: The Sporter, Mannlicher and Heavy Barrel models.

THE VIXEN SPORTER is a 6½ lb. featherweight. Reports from owners everywhere testify to accuracy unsurpassed by any rifle of its type.

THE VIXEN MANNLICHER, for those shooters who prefer the lines of the full length stock, is well balanced and proportioned for easy handling.

THE VIXEN HEAVY BARREL RIFLE, with high comb target type stock, having beavertail fore-end, is designed for the varmint hunter who wants the extra plus accuracy and better holding possible only in a heavier rifle.

All VIXEN RIFLES are supplied with stocks having the Monte Carlo Cheekpiece at no extra cost.

STOCK DIMENSIONS: SPORTER and MANNLICHER—Length of pull, 13½"; Drop at comb 1⅛"; Drop at heel 1⅛"; HEAVY BARREL—Length of pull, 13½"; Drop at comb, 7⁄16"; Drop at heel, ¾".

# SAKO *Forester* RIFLES

THE FORESTER  
B163

THE FORESTER MANNLICHER  
B173

THE FORESTER HEAVY BARREL  
B183

The above models have the new 1961 modification: i.e., No. 4 adjustable safety trigger and right hand safety as shown on SAKO Magnum Mauser Rifles.

When the short length, high intensity cartridges were developed they had to be handled in actions originally designed for the longer high power cartridges, such as the .30-06 and .270. Special adaptors had to be fitted into the magazines to accommodate these shorter cartridges. The development of a lightweight rifle, using these heavier actions, was almost impossible. Thus, the need became apparent for a shorter action designed to operate efficiently with the intermediate length cartridges. The development of the L-579 action, providing minimum weight with maximum strength, was the first step towards providing a sporting action with a weight and strength ratio best suited for the manufacture of an extra lightweight rifle with the super accuracy required of a varmint rifle and powerful enough for big game hunting. When the Forester rifle came into being it was chambered first for the .243 Winchester cartridge, then, subsequently, in the .244 and .308. It is now available in these three calibers in the LIGHTWEIGHT, the HEAVY BARREL and the MANNLICHER type models.

To build a perfect, all 'round rifle, the medium length L-579 action was combined with—a Bofors steel barrel, highly resistant to wear and corrosion, with 12 land, super smooth rifling—and—a new pattern stock with Monte Carlo cheekpiece and high comb, made of hand-somely figured, selected European walnut, beautifully hand checkered and finished.

Other special features in the Forester rifle include: Integral tapered dovetail SCOPE MOUNT BLOCKS, to permit instant removal or replacement of the scope or the optional DUAL-RANGE PEEP SIGHT, without any loss of zero; field tested SAKO ADJUSTABLE TRIGGER which affords target type trigger pull; HINGED FLOOR PLATE with release inside of trigger guard; positive, easy working RIGHT HAND SAFETY which blocks firing pin and locks bolt; square post FRONT SIGHT on hooded ramp.

All Forester rifles are test fired with special high intensity proof loads to assure maximum strength and are then subjected to precision testing to assure top accuracy.

# SAKO DELUXE *Vixen* AND *Forester* RIFLES

SAKO FORESTER DELUXE RIFLE  
B168

In addition to all the features offered on the standard Vixen and Forester rifles the Deluxe rifles have "extras" which have never heretofore been available on a semi-production line gun and which are seldom seen even on the most expensive custom made guns:

- Exceptionally high-grade French walnut stock, selected for beauty and strength.
- Custom skip-a-line checkering, painstakingly executed by hand by master Finnish wood craftsmen.
- Fitted fore-end tip and grip cap of contrasting exotic wood with white line spacers.
- All metal surfaces polished to a high gloss and expertly blued to provide the deepest, most brilliantly lustrous finish.
- Trigger guard and floor plate deeply engraved with a strikingly simple modernistic design, inlaid and finished in the same high gloss as used on all other metal parts.
- Sako's own rubber recoil pad with white line spacer, perfectly fitted for top comfort and appearance.

Even in their standard rifles Sako has given us accuracy, which is supreme and unchallenged. The finish of wood and metal has been lauded by sportsmen and gun experts throughout the country.

In a recent gun magazine, one of the editors remarked:

*"I have never observed a quite so nicely polished and blued gun. The grade of wood used on the new L-579 (Forester) is far better than what most shooters are accustomed to seeing. The stock of the Sako incorporates features and styling usually available on super grade guns only. Although the classic lines and minimum weight of the L-579 (Forester) gun may be deceiving, this weapon is, without a doubt, one of the most accurate, best-looking and one of the safest guns to adorn my gun room rack. I have a strong hunch that a real shooter was in on the designing of this new gun. It is delivering benchrest accuracy for me."*

These comments were unsolicited and were about the Standard Forester rifle.

#### VIXEN DELUXE:

Built on the L-469 action and designed especially for the smaller calibers, the Vixen Deluxe is the perfect combination of beauty, accuracy and reliability. Calibers: .222 and .222 Magnum only.

#### FORESTER DELUXE:

Built on the L-579 action for use with the medium length, high intensity cartridges, this beautiful, powerful, accurate rifle will form the focal point in any collection of fine guns. Calibres .243, .308.

Detail of engravings of floor plate and trigger guards of the Vixen Deluxe (top) and Forester Deluxe rifles.

# SAKO *Vixen* BARRELED ACTIONS

19

Barrel actions are for  
sale to Gunsmiths only

VIXEN LIGHTWEIGHT BARRELED ACTION

B223 .222 & 222 Mag.

VIXEN HEAVY-BARREL BARRELED ACTION

B243F .222 & 222 Mag.

The Sako L-469 Action, with all its fine characteristics, and a barrel of fine Bofors steel are joined to make an assembly completely finished and blued, ready to drop into a stock. The action, noted for rugged strength, precision and compactness, with its integral tapered scope mount blocks, positive right hand safety and fully adjustable trigger, is fitted with a barrel, engineered for long wear and accuracy, carefully bored, rifled and chambered. The assembly is rigidly inspected, gauged and proof tested. A Patridge type blade front sight on a matted ramp with removable hood and the Sako Dual-Range peep sight are installed, making a unit certain to give complete satisfaction when fitted with the stock of your choice. Custom stock makers and users who fit their own stocks are impressed by the ease of inletting made possible by the simple design of the action and the pleasing, clean profile of the barrel.

VIXEN HEAVY-BARREL BARRELED ACTION WITHOUT SIGHTS

B241F .222 & 222 Mag.

The Sako Vixen Mauser Barreled Actions are available in three types: THE SPORTER MODEL, best suited when planning for a light rifle which is accurate and dependable. The light weight barrel is designed to give maximum accuracy with minimum weight.

THE HEAVY BARREL MODEL, for the rifle maker or shooter who wants the extra accuracy possible because of the extra weight. Many match rifles are being made with this model. The straight tapered barrel is sufficiently heavy to effectively dampen vibrations and maintain accuracy.

THE HEAVY BARREL MODEL WITHOUT SIGHTS, for the heavier rifle which will be used with telescopic sights only. Ideal for a benchrest rifle or a super accurate varmint rifle. Supplied with the same heavy, straight tapered barrel as on the Heavy Barrel model.

# SAKO *Forester* BARRELED ACTIONS

Barrel actions are for  
sale to Gunsmiths only

FORESTER BARRELED ACTION

B263

FORESTER HEAVY BARREL BARRELED ACTION

B283

FORESTER HEAVY BARREL BARRELED ACTION WITHOUT SIGHTS

B281

The new Sako L-479 action, designed especially for use with the intermediate length, high intensity cartridges, is fitted with a long wearing, corrosion resistant Bofors steel barrel, made through the latest barrel making processes developed by Sako, resulting in barrels with super smooth rifling to assure top accuracy.

All Sako barreled actions are completely finished, polished and blued, proofed for strength and precision tested for accuracy.

THE FORESTER LIGHTWEIGHT BARRELED ACTION—for a really lightweight high power or varmint rifle with gracefully curved taper, minimum weight barrel.

THE FORESTER HEAVY BARREL BARRELED ACTION—for the high power or varmint rifle, where the shooter wants that extra weight for better holding, with a heavy straight tapered barrel.

THE FORESTER HEAVY BARREL BARRELED ACTION, WITHOUT SIGHTS—for the rifle which is to be used with telescope only. It has the same heavy, straight tapered barrel, ideal for the serious minded, long range shooter, for benchrest work or super accurate varmint hunting.

Sako's method of barrel making is second to none. The proof of their abilities is borne out by the success gained by the users of target rifles, fitted with Sako barrels, in Olympic and other target matches throughout the world.

Sako's method of making barrels precludes the use of imperfect barrels in rifles or barreled actions. As the factory states, "It is very possible to make cheaper barrels, but in doing so it is probable that they will be inferior barrels, many of which must be discarded on inspection. It pays, then, to use the best available processes, materials, machines and labor."

## SAKO L-579 ACTIONS

SAKO L-579  
MEDIUM LENGTH ACTION  
B361

The all new Sako L-579 medium length action, designed primarily for use with the medium length, high intensity cartridges, is the latest, feature loaded addition to the Sako action family.

The L-579 action is a bolt action which cocks on opening stroke. The bolt is equipped with a guide rail to aid in smooth functioning of the bolt. The bolt handle is relieved to accommodate even the lowest mounted scopes. The receiver has classically simple lines. Maximum strength is combined with a minimum of bulk and weight. Such a result could be achieved only through the use of the most modern materials and engineering techniques. The magazine, which is a staggered row

SAKO L-579  
MEDIUM LENGTH BENCHREST ACTION  
B311

Mauser type, holds five rounds and is provided with a hinged floor plate which has a latch located within the trigger guard. The new model actions have #4 adjustable trigger with safety parallel to stock for easy application. Photo shows old style. The firing pin depth can be adjusted at the threaded cocking piece for positive primer ignition through controlled firing pin protrusion. The trigger guard is shaped for easy use, even while wearing gloves. The adjustable trigger is serrated and carefully formed for easy operation. Integral dove-tail scope mount blocks hold scope mounts or peep sight in perfect zero. Most domestic mount makers supply scope mounts to fit the Sako base. Sako split ring mounts are available to accommodate most domestic scopes. High lustre finish assures long lasting beauty, even after reasonable abuse.

## SAKO L-469 ACTIONS

SAKO L-469  
MAUSER ACTION  
B321

A MINIATURE MAUSER TYPE ACTION, designed for the smaller cartridges, the Sako Short-Action Mauser action has proven itself to be ideally suited as the basic component around which the most accurate varmint rifles are built. The proportions and simple design of the receiver simplify the inletting and fitting of the stock while assuring greater strength, pound for pound, than any other bolt action made commercially today. Integral tapered dove-tail scope mount blocks permit installation of lowest mounted telescopes with available Sako scope mounts. The design of the Sako scope mount is such that the telescope can be exchanged instantly for the Sako Dual-Range peep sight. Both scope mount and peep sight can be mounted and dismounted without tools. The bolt locks on two lugs at the front, while a safety block is formed by the bolt handle collar against a husky abutment at the rear of the action. The bolt handle is relieved to accept low mounted scopes. The safety on the right hand side of the bolt sleeve is a positive, easy working bolt lever, operating in a short arc. An

SAKO L-469 MAUSER  
BENCHREST ACTION  
B301

indicator conspicuously signals "off safe" position. The magazine, of a clip type, holds three rounds in a vertical position. It is retained by a positive catch, located in the trigger guard for easy access. The trigger, fully adjustable for weight of pull, backlash and creep, offers the crisp, clean let-off so necessary for accurate, fast shooting. The firing pin, of one piece construction, has a length of fall of only .234" and is retained in the bolt by the cocking piece with an interrupted thread lock.

THE SAKO SINGLE SHOT BENCHREST ACTION differs from the Sako Short-Action Mauser Action in that the receiver is not cut on the underside for magazine loading. The solid bottom receiver offers increased rigidity not otherwise possible without extensive alterations. The pattern of the trigger guard further eases the inletting job. The Sako Single Shot Benchrest Action offers unmatched utility as the ideal action for the benchrest or target rifle. Many single shot varmint and sporting rifles are also being built on this action.

# SAKO MAGNUM MAUSER BARRELED ACTIONS

B251

SAKO MAGNUM MAUSER BARRELED ACTIONS  
FOR .300 H&H & .375 H&H MAGNUM CARTRIDGES

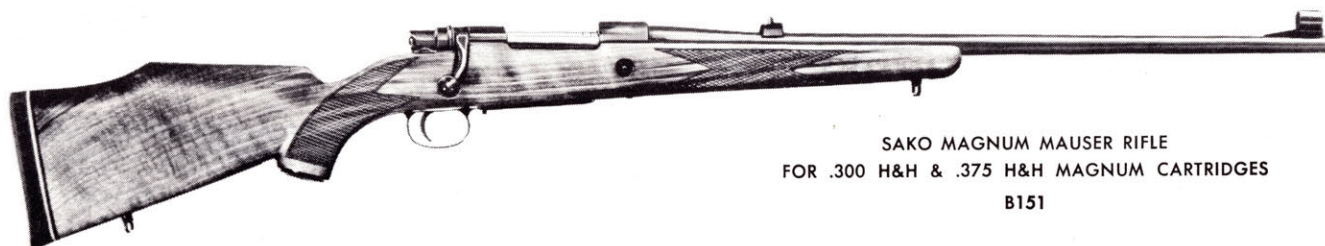

THE FAMOUS F. N. MAUSER ACTION, MODIFIED FOR THE MAGNUM CARTRIDGES, is fitted with the amazingly accurate Bofors steel barrel by Sako. The 24" barrel is precision bored and rifled and subjected to critical inspection and gauging. The barreled action is equipped with a two-leaf rear sight, Patridge type front sight on a hooded

ramp and the Sako trigger, adjustable for weight of pull, creep and backlash. It is then proof tested, polished and blued to make a completely finished assembly, ready to fit into the stock of your choice. The action is drilled and tapped for scope mounts.

# SAKO MAGNUM MAUSER RIFLES

SAKO MAGNUM MAUSER RIFLE  
FOR .300 H&H & .375 H&H MAGNUM CARTRIDGES  
B151

THE FAMOUS F. N. MAUSER ACTION, used by more gun makers for the building of sporting rifles than any other action, is superbly strong, easy to operate and keep clean, and positive in its function. To this fine action the Sako factory has added their own barrel of the finest Bofors steel, highly resistant to wear and erosion, carefully profiled for optimum weight and pleasing shape, bored and rifled with utmost precision.

THE SAKO TRIGGER, adjustable for creep and backlash, is installed for a clean and crisp pull, so necessary for accurate shooting.

THE SIGHT COMBINATION consists of a two leaf sight with one leaf folding and a Patridge type front sight blade on a matted ramp with removable hood. The action is drilled and tapped for scope mounts.

THE STOCK, of select European walnut, with scope-height comb and Monte Carlo cheekpiece, is well proportioned for comfortable holding and eye appeal. It is fitted with sling swivels, rubber recoil pad and grip cap. It is hand checkered and inletted by expert craftsmen.

The above Models are fully covered by NAACO Factory Warranty and Service.

## NAACO MISCELLANEOUS PARTS

### SAKO #4 ADJUSTABLE SAFETY TRIGGER

All Sako magnum rifles and barreled actions are equipped with the new Sako #4 adjustable safety-trigger at no extra cost. It is also available as an accessory to fit all Mauser actions—with a minimum of alteration to the receiver.

B969

### .222 SAKO SPARE MAGAZINE

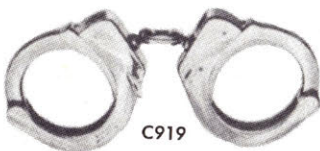

Holds three rounds in vertical row for easy, jam-proof loading. The magazine is held in the rifle by a positive latch within the trigger guard. Magazines can be interchanged quickly and with a minimum of effort. Many hunters carry their extra ammunition in one or more spare magazines.

B939

### SAKO DUAL-RANGE PEEP SIGHT

Exceptionally rugged—built to withstand abuse, the Sako Dual-Range peep sight will hold adjustment under all conditions. A choice of two predetermined range settings can be obtained by a flick of the wrist. Rotating the peep sight one half turn changes the range from approximately 100 to 200 yards. The peep sight disc is knurled and properly marked for positive operation. Opposing screws permit easy adjustment for windage and elevation. Available with an adaptor block for use on Mauser rifles.

C919

### STAR "OFFICIAL POLICE" HANDCUFFS

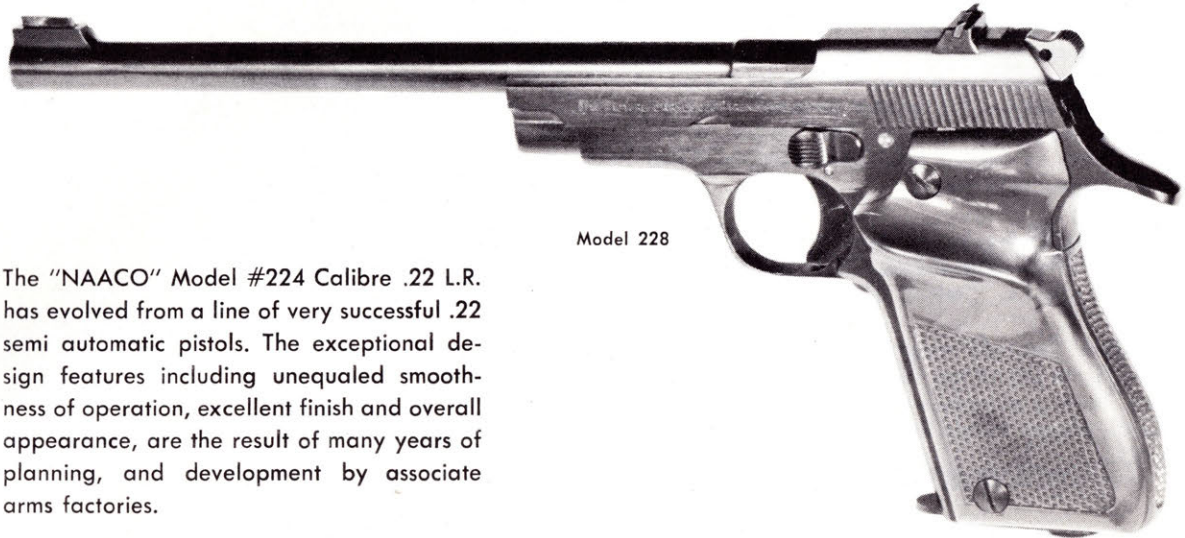

The most compact and lowest priced handcuff on the market, constructed of the best steel for light weight and rugged strength . . . heavily nickel-plated . . . meets all police requirements. Two keys, pick-resistant locks. Weight about 14 ounces.

*The above items carry full NAACO factory Warranty and Service*

# NAACO IMPORTED STAR *STARLITE* PISTOLS

The light weight and compactness of these pistols were made possible only through the use of the especially developed "Starlite" alloy. The frames of these pistols are machined throughout and should not be compared with castings or mouldings used on some handguns for the sole purpose of lowering production costs. The "Starlite" alloy is used only to lessen the weight of the gun and to make possible the availability of various color combinations. Either of the Starlite pistols makes an ideal presentation piece.

**THE STARLET**, developed to replace the famous Star Model CO, improved throughout with streamlined frame of "Starlite" alloy, positive safety, unbreakable grips, external hammer. Caliber .25 auto. only.

**STARFIRE**: The light weight and small size of the Starfire could be achieved only through the use of the "Starlite" alloy to lessen weight and enhance the appearance. Truly a powerhouse in vest pocket size. 7 shots, almost a ton and a half of muzzle energy in less than a half pint package—14½ ounces. Caliber .380 auto. only.

NOTE: All Star Pistols are supplied with extra magazine

## STAR HIGH-POWER PISTOLS

**CALIBER .38 SUPER & CALIBER 9mm LUGER PISTOLS**: The Star pistols, Model A Super (.38 Super) and Model B Super (9mm Luger), meet the highest standards established by the Star factory, and combine perfect function with rugged endurance. These pistols are built on an especially strong frame to fire the powerful .38 Super cartridge, or the reliable 9mm Parabellum.

An exclusive feature of the Super models is the two second take-down, made possible through the use of a cam and ramp breech lock. Through this system the pistol can be field stripped for cleaning in a matter of seconds. In addition, the same system provides for longer wear-proof operation and increases the inherent accuracy of the pistol. Extra safety features that are provided include: The magazine safety . . . the live round indicator . . . the half-cock notch on the hammer . . . big, Patridge type sights . . . and the crisp trigger pull.

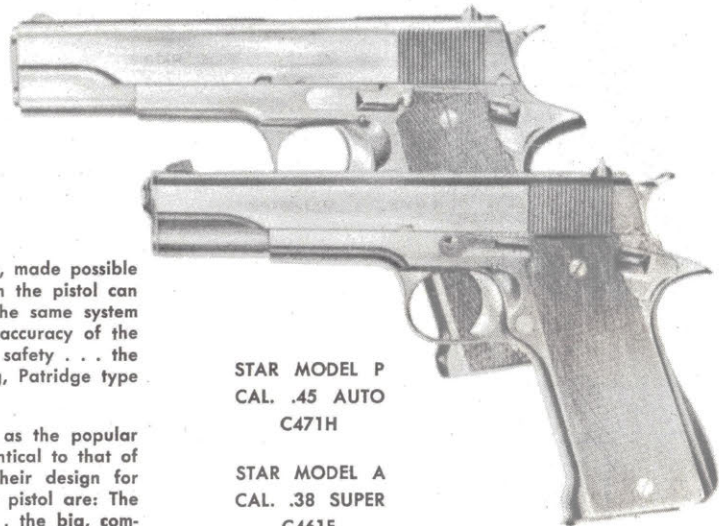

**CALIBER .45 ACP PISTOLS** feature the same lock breech mechanism as the popular Government Model pistol. While the take-down of the Model P is identical to that of the Browning system, the various internal parts are distinctive in their design for positive function and endurance. Among the features of the Model P pistol are: The full size ½" front sight blade . . . wide, square notch rear sight . . . the big, comfortable, checkered composition grips . . . the crisp trigger pull and positive safety for best shooting and safety.

## NAACO IMPORTED ASTRA PISTOLS

ASTRA—Unceta y Compania, S.A. of Guernica, Spain, has applied the skills gained and techniques developed in over 50 years of manufacturing experience to produce the world famous line of Astra pistols, unequalled in strength, beauty, precision and safety. Astra's adherence to exacting specifications in design, their use of the best quality of material and uncompromising workmanship make it possible to unconditionally guarantee all Astra pistols against any defect of manufacture or material. Astra pistols are made in a variety of types, sizes, calibers and finishes.

**ASTRA CUB, .22 SHORT RIM FIRE:** The Astra Cub pistol was developed to fill the demand for a compact, light weight pistol which would use the caliber .22 Short cartridge and which would meet the requirements of safety, reliability, accuracy and low cost. It is the IDEAL SIZE AND WEIGHT for the outdoorsman, fisherman or hunter. IT IS SAFE. The combination of thumb safety, magazine safety and hammer half-cock notch effectively prevents accidental firing of the pistol, even when subjected to considerable abuse. IT IS RELIABLE. Extra care has been given to the design of all critical parts to assure close fitting with minimum tolerances for perfect functioning. IT IS ACCURATE. Even with the 2" barrel and comparatively short sighting radius, the Cub pistol is capable of surprising accuracy.

**IT IS LOW IN COST.** Although it's one of the best pistols on the market, it is among the least expensive. In addition, the cost of ammunition is less than a penny per round! It is the answer to the plinker's dream. The Astra Cub pistol is second to none in versatility. It is ideal for hunting small game or as a personal defense weapon. The Astra Cub pistol is normally supplied with a lustrous blue finish and unbreakable plastic grips. It is also available in the beautifully hand engraved deluxe model, chrome plated to provide a long lasting, corrosion proof finish.

**ASTRA CAMPER, .22 SHORT RIM FIRE.** The Astra Camper is identical to the Cub pistol in design, workmanship and quality. It differs only in that the longer 4" barrel provides a longer sighting radius, which is ideal for easier aiming. The overall length of the pistol is still under 6½" and the increase in weight is negligible. The Camper pistol is the perfect alternate where the convenience of the Cub's extra small dimensions can be surrendered for the sake of better accuracy.

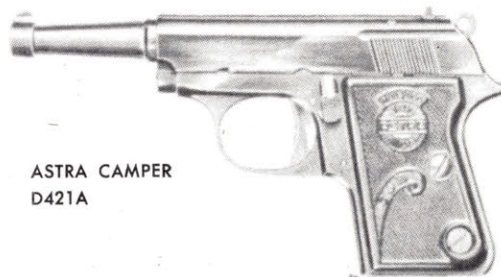

**ASTRA FIRECAT CALIBER .25, CENTER FIRE.** Similiar to the Cub pistol in size and pattern, the Astra Firecat pistol has a concealed hammer and safety features that make it the safest .25 caliber pistol on the market. The 4 safeties of the Firecat are: (1) The thumb safety, which directly blocks the trigger. (2) The magazine safety, which prevents firing of the pistol when the magazine is removed, thus eliminating the possibility of discharging a round inadvertently left in the chamber. (3) The grip safety, which locks the sear in engagement with the hammer, preventing disengagement by the trigger bar. The pistol can be fired only if held in the hand with the grip safety depressed. (4) A live round indicator, which signals the presence of a cartridge in the chamber by means of a protruding pin which is readily visible by day and can be felt with the finger in the dark. The Astra Firecat is normally supplied in a lustrous blue finish, but is also available in the beautifully hand engraved model, chrome plated to provide a long lasting, corrosion proof finish.

### Recommendations on cleaning your "Grizzly" Rifles

All Grizzly Rifles are completely oiled and cleaned at the factory after test firing and final inspection, before they are packed in carefully designed shipping cartons.

However, they may be opened at our dealers for display and NAACO recommends the following to insure your Grizzly Rifles will have long life and smooth operation.

**First** Remove all wrapping materials, checking at this time to make sure all parts such as bolt, sights, etc., are not left in wrapping. Assemble rifle completely and wipe with clean cloth using NAACO Special Gun Cleaning Solvent which will effectively remove all protective oil film applied at factory.

**Second** Wipe rifle with clean dry cloth.

**Third** Using clean cloth, go over complete gun using NAACO Special Gun Oil which will leave a very light film of oil over all parts of rifle which now may be placed in gun rack, ready for use at any time.

**Fourth** If shooting on a very cold day make sure all NAACO oil or grease is removed from rifle indoors, at room temperature before taking or using gun outside. This will assist in giving your gun efficient operation even in cold weather which can congeal oils and grease and cause malfunctions.

"Mallard" Shotgun should be treated in accordance with above care to ensure smooth efficient operation.

NAACO offers Canadian Sportsmen its own complete Gun Cleaning Accessories and recommends you see the complete line at your favorite dealer.

NAACO .22 Calibre Rifle Cleaning Kits — Model #22

NAACO High Power Rifle Cleaning Kits — Model #308

NAACO Shotgun Cleaning Kits .410 to 10 Ga. — Model # 12

NAACO Oil, Grease and Solvent Kits — Model #8

| 28 Ga  | 2¾" Standard | 28" F & M Barrels      |
| 410 Ga | 3" Magnum    | 28" F & M Barrels      |

\*See other catalogue pages for complete specifications by models.

## NAACO Bird Recommendations

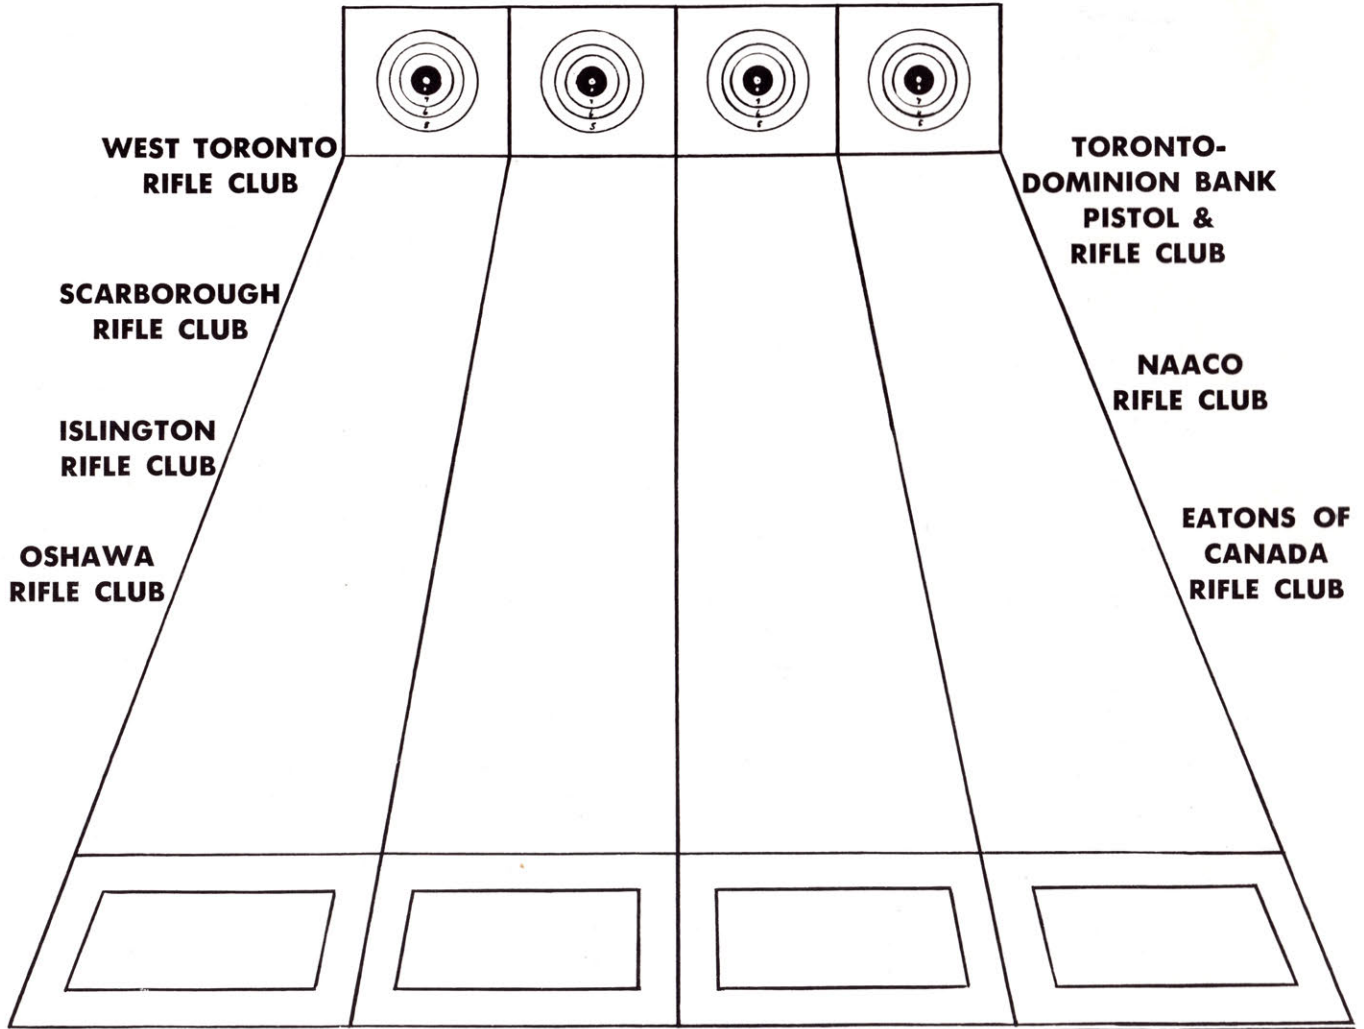

| Type of Bird        | Shot Sizes | Gauge    | Choke                  |
|---------------------|------------|----------|------------------------|
| Spruce Grouse       | 6, 7½      | 12 to 20 | Cyl. or Imp. Cyl.      |
| Ruffed Grouse       | 6, 7½      | 12 to 20 | Cyl. or Imp. Cyl.      |
| Sharptail Grouse    | 6, 7½      | 12 to 20 | Mod. or Full           |
| Hungarian Partridge | 7½, 8      | 12 to 20 | Imp. Cyl. or Mod.      |
| Pheasant            | 5, 6, 7½   | 12 to 20 | Mod. or Full           |
| Woodcock            | 7½, 8, 9   | 12 to 20 | Cyl. or Imp. Cyl.      |
| Wilson's Snipe      | 7½, 8, 9   | 12 to 20 | Imp. Cyl. or Mod.      |
| Ptarmigan           | 6, 7½      | 12 to 20 | Mod. or Full           |
| Blue Grouse         | 6, 7½      | 12 to 20 | Mod. or Full           |
| Band-tailed Pigeon  | 6, 7½      | 12 to 20 | Mod. or Full           |
| Ducks and Geese     | 2, 4, 5, 6 | 10 to 12 | F & F or Full and Mod. |

## Suggested Shot Sizes

| Shot Size | Diameter in Inches | No. Pellets Per Oz. |
|-----------|--------------------|---------------------|
| 10        | .070               | 868                 |
| 9         | .080               | 585                 |
| 8         | .090               | 409                 |
| 7½        | .095               | 350                 |
| 6         | .110               | 223                 |
| 5         | .120               | 172                 |
| 4         | .130               | 136                 |
| 2         | .150               | 88                  |
| BB        | .180               | 50                  |

# INDOORS with NAACO

NAACO will be "host" to many Rifle and Pistol Clubs who will enjoy our hospitality each evening.

Many Rifle Clubs will enjoy the safety features and modern conveniences at the NAACO Proving and Testing Range where every "Grizzly" Rifle and "Mallard" Shotgun is individually checked, fired, and proofed by our Master Gunsmith before passing final inspection. NAACO made in Canada quality is fast gaining recognition in world export markets and is establishing a new standard of excellence in Sporting Arms. Rigid Safety Rules are followed in the NAACO Target Ranges and young and old, male and female will enjoy one of the fastest growing sports, Indoors with NAACO.

**NORTH AMERICA ARMS CORPORATION LTD.**

# **NAACO Outdoor Suggestions**

## **Hunting Clothes**

Hunting clothes should be selected on a basis of light weight but embodying maximum warmth. The sleeve length is very important and should be on the long side to permit ease of movement when lifting your rifle or shotgun to firing position. This also applies to sweaters and shirts worn under your Hunting Jacket. Make sure all bulkiness is removed from pockets where your rifle or shotgun stock rests against your body or shoulder area.

It is suggested that your shoes also be examined periodically to make sure the sole has not worn smooth, which will cause you to slip or fall more readily than if sole is in good condition. Extra insoles are always handy and can be exchanged each time worn to keep the feet warm and comfortable.

## **Miscellaneous**

Extra socks and gloves are always handy as well as large handkerchiefs, underwear, first aid kit, sunglasses and extra trousers that fit snug inside your hunting boots.

## **Hunting Areas**

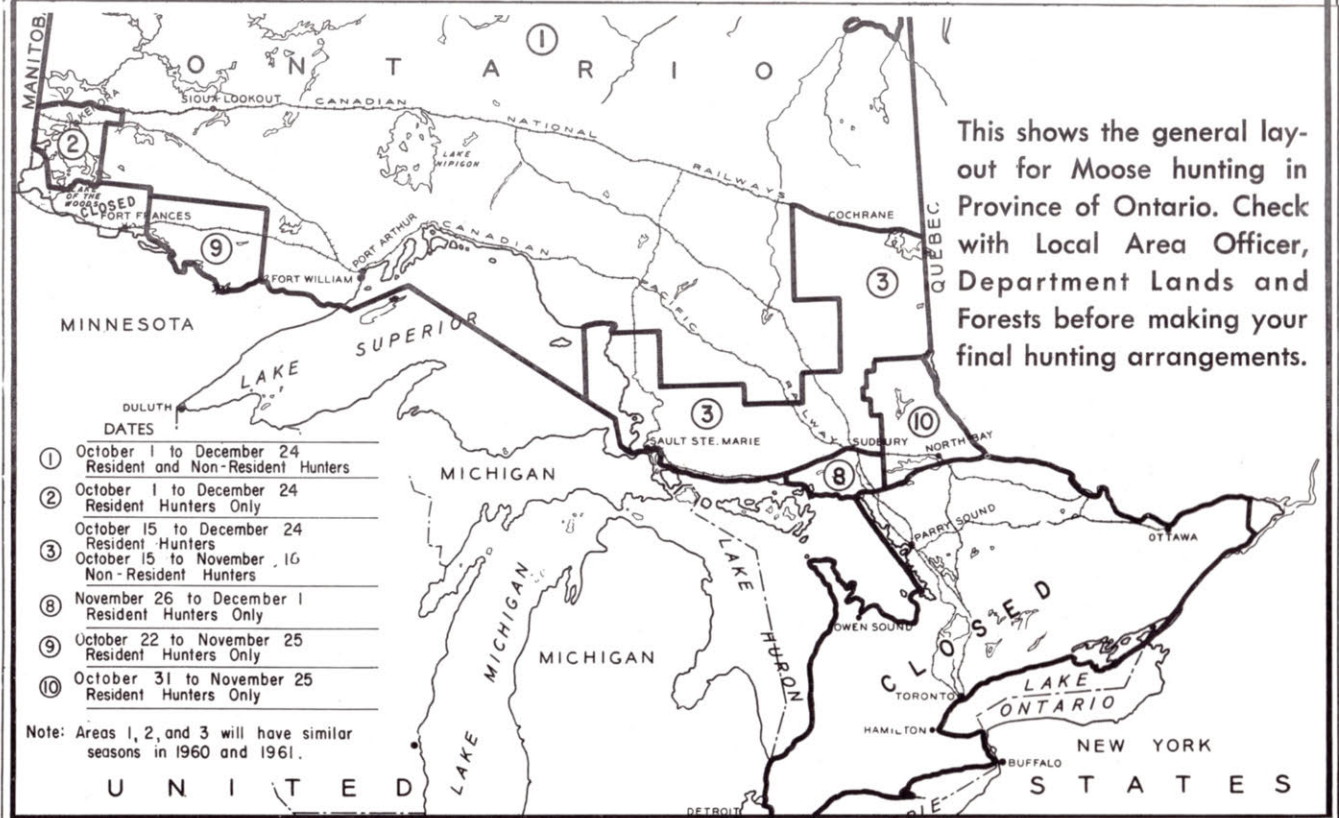

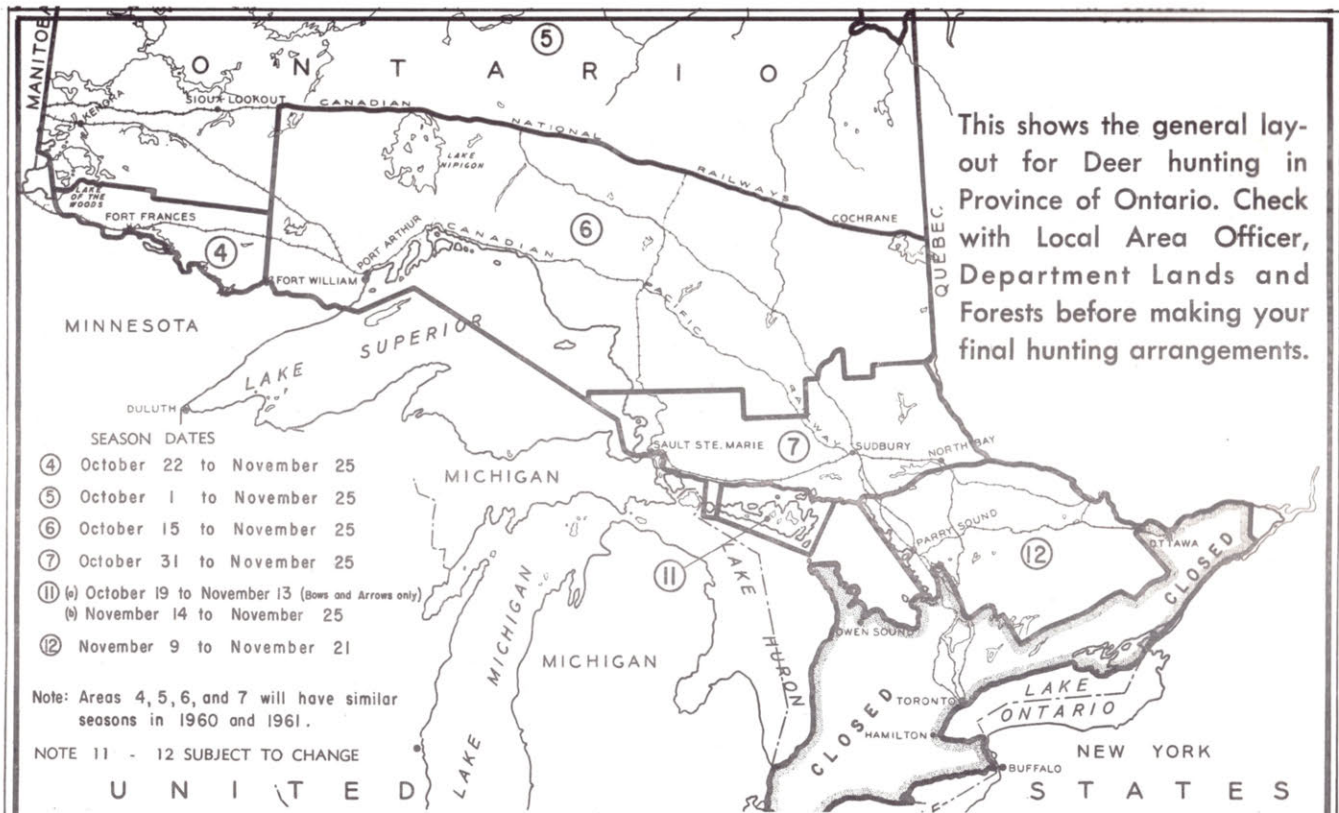

NAACO suggests that if you are not familiar with the specific area that you plan to hunt you contact the local office of Department of Lands and Forests, who can readily brief you on their local district. Also do not leave this important item until the last minute.

## **Hunting Regulations and Permits**

NAACO suggests that a well organized hunt always has an elected Hunt Captain, who can always obtain, well in advance, from the Department of Lands and Forests, specific regulations covering the district you plan to hunt in. Your permit can be renewed or if a new permit is required members of the hunt can be advised in advance how to obtain the new permit.

# "TRADE AND CONSUMERS LETTERS RECEIVED BY NAACO"

NAACO extracts of interest to the Sportsman

19/10/59—NAACO, Just shot a 165 lb. buck with the first two shots from my new "Grizzly". My dad is going to order one for next year. Does it hold 4 or 5 shots? Please send me another set of literature. I lost mine.  
L. M., North Bay

23/7/59—Received the Literature on your new .308 Grizzly Rifle. I like the easy method of installing the Scope Mount on the receiver without drilling and tapping. Let's have more of this type of design on the rest of your NAACO Made in Canada Sporting Arms.  
A. T., Halifax

6/2/60—Are NAACO selling thru Distributors or direct to Dealers? I have been trying to obtain 3 more of your .22 Calibre Rifles and most Distributors are sold out. Can you advise what Distributor has your Model #10 in stock? Is your pump shotgun in production? Send Literature Direct.  
K. R. R., Quebec City

WIRE—20/10/60—Ship Balance of Pump Shotguns at once. New Order #791 — 12 MORE.  
ADVISE BY Return if not available.  
O. L. M., Winnipeg

19/6/59—Glad to hear that your new Sporting Arms Factory is producing a deluxe .308 Cal. Grizzly Rifle. I have an order in for one and look forward to receiving it as soon as possible. When will they become available?  
J. H. D., Vancouver

16/10/60—THANKS FOR PROMPT Shipment on Scope Mounts. Can you supply them in high, medium or low from stock? Advise Collect.  
C. R., Montreal

10/1/61—Received your Model #30 .22 Calibre Grizzly Target Rifle with blonde stock for Christmas. Shot a 99 last Saturday. My chums are going to buy some soon.  
P. Q., Toronto
